A photograph of a Native American man in traditional attire. He is wearing a large feathered headdress, a blue and white patterned headband, and a necklace made of dried gourds. He is looking upwards and to the right. In his left hand, he holds a wooden staff or walking stick. The background is a dense forest with tall evergreen trees.

Thousands Of Years Before

the first settlers arrived in Jamestown, Native Americans were creating and developing farming techniques. From crop rotation to cross pollination, aquatic farming, to natural resource conservation, the first Virginian's set an agricultural path that has lasted centuries and has formed the basis from which we farm today.

The Beginning of Virginia Agriculture

When seeds gathered for food were accidentally scattered around their campground, Native Americans discovered that harvesting the plants was easier the next season, and so began agriculture in Virginia.

About 4,000 years ago, in the Woodland period, Eastern North American Indians domesticated four native plants; squash, sunflower, sumpweed, and goosefoot. In time, knotweed, maygrass, and “little barley” were added to the list. Although these wild plants were the beginning of agriculture in Virginia, they provided a very limited source of nourishment. Native Americans continued to rely on nomadic hunting and gathering for survival. At this time the population remained thin because the food supply was unreliable.

Eventually, Southwest and Mexican explorers, playing an integral role in Virginia agriculture, introduced a different variety of squash (early pumpkins rather than the earlier varieties of modern acorn/summer squash), beans, and corn cultivation. The variety of corn adapted to the short growing season in Virginia (as opposed to

corn’s native habitat in Mexico) promoted a stable food supply and stimulated a population explosion in the Mississippi Valley. Even with a stabilized food supply, Native Americans realized that a nomadic way of life improved soil conditions, prevented over-harvesting of aquatic life, and reduced the risk of disease. They continued to live nomadically for several thousand years.

By systematically collecting and cultivating different plants, Native Americans produced crops suited for their climate and lifestyle. When Europeans arrived in the 16th and 17th century, they found an established agricultural system that included corn, melons, beans, squash, and tobacco. Out of these crops, corn and tobacco became the most pivotal to Virginia history. Corn was the most sought after grain of the colonists and was used by Native Americans as a major bartering tool. Through tobacco, Virginia Natives helped form the economic basis of the first successful English colony in North America.

Lobelia Inflata or “Indian Tobacco”

The History of Corn

Corn is a domesticated form of teosinte, a wild grass found in isolated patches in the Mexican western Sierra Madre. This early corn looked very different than today's corn in that the kernels were small and individually covered by their own floral parts (similar to oats and barley) and the cob readily broke into small fragments. Additionally, the grain generally developed near the top of the plant. Over a period of thousands of years, Mesoamerican natives improved the crop by systematically selecting for desired traits which has led to the present day appearance of corn.

Teosinte plant.

Virginia Tobacco

Jamestown Exhibit

When John Rolfe arrived in Virginia in 1610, the Virginia Company had not found a profit-making commodity. Rolfe learned that the Virginia Indians grew a ceremonial tobacco with a "biting taste." Smokers in England preferred the sweet-scented variety imported from the Spanish colonies in the West Indies.

Aware of tobacco's growing popularity, Rolfe obtained and planted seeds of this sweet type. He sent a small shipment to England in 1614. By 1616 more than 2,000 pounds were shipped, and by 1620, more than 40,000 pounds. Profits soared and a boom was on. Colonists began planting the "golden weed" everywhere, even, as Governor Samuel Argall noted in 1617, in "the marketplace, and streets, and all other spare places" in Jamestown. As late as 1630 Governor John Harvey reported "no other commodity but tobacco in the colony" and a "great want of corn."

After almost ten years of failure with various economic ventures, Virginians at last found their cash crop in the "golden weed," tobacco. Tobacco became the colony's financial savior.

Colonists quickly gave up all other products to meet the demand in England. As production increased phenomenally into the 1620s, tobacco became readily available for mass consumption in England. All classes and genders smoked. Virginia became synonymous with tobacco, and Virginians developed a way of life revolving around its production.

The USDA started keeping limited annual tobacco statistics for Virginia in 1866. For that year, 70,000 acres of tobacco were harvested. The average yield was 640 pounds to the acre and the total Virginia crop was 44.8 million pounds. The value of that crop was estimated at 13.3 cents per pound or 5.96 million dollars. Harvested acreage trended upward from 1866 until it peaked in 1920 at 242,000 acres. Yields have also trended upward since 1866 with the current record yield of 2,320 pounds per acre recorded in 1999. Record tobacco production occurred in 1952 when the state produced 185.1 million pounds. The highest average price received by producers for all tobacco occurred in 2001, and

averaged 1.906 dollars per pound. The most valuable crop in terms of total dollars was in 1981 when the crop was valued at 266.6 million dollars.

How does tobacco compare with the rest of Virginia agriculture? In terms of all dollars received from all agricultural products sold, tobacco's share has fallen from nearly 20 percent of the total in the early 1960's to around 3 percent today. This should not be surprising as tobacco quotas are cut, and as Virginia's agricultural base diversifies. When looking at just crop sales, tobacco is the number four cash crop in Virginia. It was the leading cash crop as late as 2003. In 2006, tobacco sales of 71 million dollars was less than tomatoes, soybeans and corn.

The ports of Hampton Roads are the largest in the United States in exporting tobacco and tobacco products.

Preserving Our Agricultural History

From the Jamestown landing to civil war battlefields, Virginia is an historically rich state and her agricultural history is no exception. Virginia's farm museums and living history museums tell a rich and full story of her past and present agricultural history. From colonial farming to goat milking; antique equipment to a hands-on farming experience for children, the options are endless in Virginia's agricultural museums.

Northern Neck Farm Museum Is A Vision In Progress

When Luther Welch began collecting various farm implementations several years ago, it was basically on a whim.

"I was just collecting items that reminded me of my family's homestead and growing up on the farm," the 74 year old Lancaster county farmer said. "I didn't know this museum was going to come into being. I was just collecting things that I used from when I was a boy as young as 6 years old."

Since then Welch has amassed thousands of pieces ranging from jacks and saw blades to early-19th-century tractors and even a treadmill built for dogs to provide a little low-cost farm labor.

"You put a dog in there, he turns the belt and that in turn would be attached to a grinder or other small piece of equipment," Welch explained. "We'd put the dogs to work too, and we had bigger treadmills for horses."

Welch's collection outgrew a standard room and is now housed in a 20,000 square foot barn.

Most of the tractors and other mechanized machinery are operable, as Welch not only acquired the pieces, but restored a great many of them. Each item has been tagged and inventoried.

The plan is for the museum to cover the agricultural history of the Northern Neck, from farming techniques and crops of the Rappahannock Indians, to the Colonial era, the plantation period through industrial and mechanized farming, when canneries flourished in the area.

There is no definite opening date for the museum. Thanks to volunteer help, a design for the building has been drafted; the next step is to begin construction. Ideally, the museum would be up and running by spring of 2008.

Board members and volunteers of the Northern Neck Farm clean and restore a donated windmill.

Saluting Our Agriculture Colleges

Two Institutions that have contributed greatly to Virginia Agriculture's level of excellence are Virginia State University and Virginia Polytechnic Institute and State University (Virginia Tech). From disease research to community outreach, these land-grant institutions have time and again proven their commitment and dedication to the betterment of Virginia Agriculture.

The Department of Agriculture and Human Ecology prepares students for rewarding careers in agricultural business,

nutrition and dietetics, family and consumer science, hospitality management, teaching, and government. The Agricultural Research Program seeks new knowledge to enhance the productivity and profitability of agriculture while protecting the environment. In its Cooperative Extension Program, the School transfers research-based information on agriculture, youth, environment and health to improve the life of its clientele.

The College of Agriculture and Life Sciences has come a long way since Virginia Tech's modest beginnings when Virginia Agricultural and Mechanical College first opened its doors in 1872. Through its land-grant mission of research, teaching, and extension, the college has been instrumental in helping agriculture and other life science industries make significant strides in improving people's lives. Today's College is adapting to society's expectations and needs by focusing its resources and efforts on improving human health and nutrition, sustaining agriculture and the environment, reducing the reliance on fossil fuels, and developing cures for devastating and debilitating diseases.

The Census is Coming!

The U.S. Department of Agriculture (USDA) will soon conduct the 2007 Census of Agriculture, and we need your help to make it the most effective tool it can be! The Census is only conducted once every 5 years, but it provides valuable information - information used by communities like yours as they plan for their futures.

We need farmers and ranchers like you to complete the Census as accurately and quickly as possible. Your responses, combined with those of your fellow agricultural producers across the country, provide the only source of uniform, comprehensive agricultural data for every county in the Nation.

Most importantly, this is your opportunity to provide a voice for American agriculture and have a positive influence on your future and the future of your community.

For more information about the Census of Agriculture, or if you are involved in agriculture and have not received a report form by January 10, 2008, please call toll-free:

(888) 424-7828

or visit online at:

www.agcensus.usda.gov

Be Counted!

Your Voice.

Have you ever thought that agriculture wasn't considered a valued and important industry? Do you feel like agriculture just doesn't count with a lot of people? Taking part in the 2007 Census of Agriculture is your opportunity to be heard. By accurately filling out your Census form, you are helping tell America about the value of all U.S. farms and ranches.

Join this collective voice and take this opportunity to have a positive impact on U.S. agriculture at both the local and national levels.

You have the power to influence economic developments and impact local and national decision-making about:

- Competitive market pricing.
- Farm services.
- Transportation and marketing locations.
- Environmental and conservation issues.
- Farming trends
- Production practices.
- New and changing technologies.
- And many other key issues facing you and your community.

Your Future.

The 2007 Census of Agriculture will collect information concerning all areas of farming and ranching operations, including production expenses, market value of products, and operator characteristics.

Your responses help provide information that is used for all types of agricultural planning and decision-making. This information helps USDA work with other organizations to develop short-term and long-term improvements, strategies, and safeguards.

Here are just a few examples of how the information is used to benefit your operation and your entire community.

- Your county extension office uses the data in community planning to ensure you are getting the services you need.
- Companies use the statistics to see where to put the next feed store or equipment dealer.
- Lending institutions use the information to provide sufficient funds for operational loans.
- USDA uses the information to determine if its service centers are staffed at appropriate levels to assist farmers and ranchers.
- Your input, along with that of all of America's farmers and ranchers, can make a real difference for you and your community.

You should receive your 2007 Census of Agriculture report form in early January 2008. Please submit your completed report form no later than February 4, 2008.

Your Responsibility.

As a member of the U.S. farming and ranching population, it is your responsibility to stand up and be counted. The Census of Agriculture is how you can make a difference to your operation, your community, and all of U.S. agriculture. You provide USDA with vital information that cannot be collected by other means.

To be as helpful as possible, this information needs to be accurate. That's why we ask you and other farm and ranch operators across the United States to carefully complete your 2007 Census of Agriculture form. You are the most important resource for this information because you understand it best.

Your response to the Census of Agriculture is required and protected by law, Title 7, U.S. Code. This law safeguards the privacy of your responses. Federal law requires that your individual answers be kept completely confidential. We will not disclose any data about an individual farmer's or rancher's operation. No individual information is shared with any other Federal, State, or local agency. USDA publishes the data totals for statistical purposes only, and the information cannot be used for purposes of taxation, investigation, or regulation.

Additionally, you can expect that USDA will provide you with access to the Census results in summary reports that can help you as you make decisions about your operations.

Weather & Crop Conditions

January was not a typical month for Virginia. Crops and livestock did not endure the harsh winter weather typically associated with the month of January. Warm temperatures allowed a boost in small grain growth. Plentiful rains created muddy conditions thus hindering outside work. Livestock grazed pastures and producers supplemented the pastures with hay when necessary. Producers were beginning to order supplies and preparing for spring fertilizer applications. Other farm activities this month included orchard and vineyard pruning, some calving and lambing, and maple syrup production preparations. Producers were also busy with bookkeeping and tax preparations, as well as attending winter meetings. The warm weather allowed for needed maintenance to be done on fences, barns, and equipment.

February was more like winter for the Commonwealth of Virginia than the previous month. Most areas experienced dry conditions in spite of the occasional snow and ice. Small grain and cover crops were doing well, but could have used more moisture. Dry conditions allowed farmers to do some field work such as top-dressing and applying herbicides. The lack of rain also contributed to lower pasture reserves, and increased feeding rates for livestock. Due to extreme changes in temperatures from one day to the next, some producers experienced cases of pneumonia in cattle, thus raising concerns about the health of Virginia's livestock. However, fall calves were doing well and spring calving was almost finished. Other farm activities for the month included fixing fences, attending winter meetings, and soil sampling.

March continued dry with above normal temperatures early in the month followed by below normal readings toward the end. Most areas remained dry, though a storm system mid-month brought some moisture to the state. Some producers had expressed concern about the dry conditions and the affect these conditions might have on the start of planting. Dry conditions allowed farmers to continue with some spring field work such as top-dressing and applying herbicides. Other farm activities for the month included preparing equipment for spring planting, fixing fences, and attending the last winter meetings.

April began with mild weather and very little rainfall. Dry conditions slowed the development of hay fields and small grains. Some corn had been planted, while some producers waited for moisture levels to improve. The dry days and warm temperatures allowed corn planting to continue ahead of schedule. Despite the lack of moisture, livestock appeared to be healthy. Dry conditions improved towards the end of the month. Hail was reported in some areas as most areas of the state received rainfall.

May welcomed showers the first part of the month. Beneficial rains helped to recharge topsoil moisture levels in most areas, resulting in good planting conditions for soybeans. The rain came at just the right time for the corn that had already been planted, although some producers were concerned about how the cooler temperatures would affect the crop. Some frost damage was reported in corn fields on the eastern shore, but the affected fields were expected to make a full recovery. The small grain crop looked good despite the early dry conditions.

June was a month of spotty rains and some scattered thunderstorms; however, conditions remained dry in most areas of the state. Livestock producers were concerned about the lack of hay, and were preparing to buy supplemental feed in fear of an insufficient hay crop. Dry soil conditions in some areas hindered corn and tobacco growth, and slowed soybean planting. Tropical Storm Alberto provided rainfall to some areas, and even some flooding in the Virginia Beach area. Overall, the rains did not provide enough moisture to completely offset the previous months of dry conditions.

Continued.

-Weather & Crop Conditions, continued-

July brought much needed rain relief to dry conditions throughout the Commonwealth. Sporadic rainfall across the state was beneficial to crop growth, but not quite enough to replenish soil moisture levels in all areas. Pastures were slow recovering from previously dry conditions, and a second cutting of hay was showing more promise due to better moisture conditions. Crops responded well to the increase in moisture.

August weather conditions were dry again for many areas of the Commonwealth with temperatures well above normal, and precipitation below normal. Pastures which maintained good growth in July had begun to suffer from the heat. Cattle across the state were showing signs of stress as well. Extreme temperatures dried up most of the surface moisture and affected crops, especially corn and soybeans. Early planted corn still looked good in some areas; however, most late planted corn was showing signs of stress. Corn planted for silage was drying quickly, requiring farmers to speed up harvesting efforts. Full-season soybeans continued to thrive, while double-cropped beans were showing signs of stress.

September Tropical Storm Ernesto brought significant rainfall to the Commonwealth. Most areas welcomed the rain, while some areas reported flooding of roads and fields. The storm brought rainfall amounts averaging 5 inches across the state, while some areas reported more than 10 inches of rainfall. The increase in moisture eased dry conditions, but hindered harvest and field work. Producers expected that the timing of rainfall and cooler temperatures should have improved pastures, hay fields, and field crops. Pastures had greened and hay conditions had improved. Hay supplies remained short as some cattle producers were looking for ways to find supplemental feed for the winter. Soybeans were somewhat recovering from the dry conditions.

October brought cool temperatures and adequate rainfall to Virginia. Weather conditions were excellent for fall calving and lambing. Livestock across the state was reported to be in good condition. Rains and cool temperatures were beneficial to pasture and hay conditions which continued to improve. Soybean conditions improved, but reporters felt that the yield potential was significantly reduced by the dry conditions in July and August.

November had rainy conditions for most of the month which slowed fieldwork. The rain and unseasonably warm temperatures were excellent for fall grazing and small grain plantings when the weather permitted. Heavy rainfall and flooding filled many water sources to full capacity, which caused some fence damage, and washed away some recently seeded grain fields. However, reporters in most areas said pastures, hay fields, and small grain crops looked very good.

December brought relatively mild and dry conditions to the Commonwealth. Soil moisture conditions were adequate throughout the month. Wet field conditions at the beginning of December continued to hinder harvest progress for some corn and soybean producers. However, fields began to dry out as the month progressed. Unusually warm weather throughout the month extended grazing opportunities and delayed the need for supplemental feeding in many areas. The mild temperatures and beneficial rains allowed small grains to develop nicely. Overall, winter grain crops were reported to be in good condition. Other farm activities included fall calving, fencing, conditioning equipment, storing harvest equipment, applying lime and fertilizer, and scouting for aphids and weeds.

Field Crops

Crops

Yields for other hay and fire-cured tobacco were down from previous year's record yields. Wheat yields were up 5 bushels while barley yields were down 10 bushels, from 2005. Acreage planted for wheat and cotton were up from 2005. Wheat acres planted, at 190,000 acres were up 6 percent from 2005, due to favorable prices. Acres planted to cotton at 105,000 acres were 13 percent greater than the previous year, due to a positive market and good prices. Peanuts planted, at 17,000 acres, were the lowest planted acreage on record. The decline in acreage is due to the demise of the peanut quota program.

Prices

Prices for tobacco, soybeans, and wheat were up from 2005, while peanuts fell to the lowest price since 1973. Corn's market year average for 2006 jumped up \$0.86/bu when compared to last year's \$2.14/bu. Soybeans increased 12 percent from \$5.53/bu to \$6.20/bu. The cost of production and an increase in demand for bio-fuels contributed to the rising corn and soybean prices. Peanut prices continued to fall after the end of the peanut quota program in 2003. A decline in the world wheat stocks contributed to Virginia wheat prices increasing from \$2.91/bu to \$3.15/bu. Tobacco increased slightly from \$1.50/lb to \$1.53/lb.

Cash Receipts

Total cash receipts for Virginia field crops in 2006 at 410.9 million dollars, were up 3 percent from 2005 but down 17 percent from 2004. Part of the increase was due to the 98.7 million dollars in cash receipts from fresh market tomatoes. This was a 12% increase from 2005, and makes fresh market tomatoes Virginia's number one cash crop. Cash receipts for soybeans, at 86.4 million dollars, decreased 16 percent from last year. Fewer soybean sales offset an increase in price when compared to 2005. Corn cash receipts, at 86.1 million dollars, were 6 percent higher than the previous year. Although the 2006 crop was smaller than the 2005 crop, higher prices accounted for much of the difference. Tobacco sales, at 71.6 million dollars, were 18 percent higher than in 2005. Larger production and better prices accounted for the increase. Cash receipts for cotton at 43.3 million dollars, was down 1 percent from 2005. Lower production and prices accounted for the decline.

SELECTED CROP RECORDS, 1930-2006

| Crop | | Year | Harvested -acres- | Year | Yield -per acre- | Year | Production |
|-------------------------------|------|------|-----------------------|------|---------------------|------|-------------|

Fruits

Apples

Apple production in the Commonwealth totaled 220 million pounds in 2006, 30 million pounds less than 2005 and 80 million pounds below 2004. The growing season began with mild winter temperatures and below average precipitation. Bud and bloom development was on schedule with rare occurrences of late season frost or freeze. Pollination was good and fruit set was about normal. May began with good topsoil moisture; however, conditions became very dry throughout June over most of the production region. Relief from widespread rains came the first week of July. August was somewhat dry and hot while timely rains during September brought relief to the crop. Harvest was on schedule with few weather delays.

Peaches

The 2006 season began with a very mild winter, but a cool spring. Bloom and fruit set was good; however, lingering cool temperatures impacted pollination. Dry weather during May and June caused some problems with sizing and quality. Rainfall was localized during the season while it appears that most of the production region received enough precipitation for a good crop. Some areas were good on moisture during the season but July and August tended to be

very dry. Growers harvested 4,000 tons of peaches in 2006 compared with 4,700 tons in 2005 and 4,500 tons in 2004.

Grapes

Grape production in Virginia increased in 2006 with the production of Vinifera varieties accounting for the majority of the overall production. Producers harvested a crop valued at \$8.6 million, receiving an average price of \$1,440 per ton.

Virginia ranked 8th nationally in commercial grape production and 9th for bearing acreage. Virginia's grape producers harvested 6,200 tons of commercial grapes in 2006, up 11 percent from the 5,600 tons produced in 2005.

Virginia bearing acreage increased from 2,000 acres in 2005 to 2,100 acres in 2006, a 5 percent increase over that time span.

The Chardonnay variety made up 23 percent of Virginia's total Vinifera production harvested in 2006. Also, Virginia's most popular variety accounted for 26 percent of all the Vinifera variety bearing acreage and 20 percent of the total vineyard acreage statewide. Chardonnay, Cabernet Franc, Merlot, and Cabernet Sauvignon represented the top four varieties

produced in the Commonwealth in 2006. Chardonnay producers harvested 56 tons less in 2006 compared to 2005. Cabernet Franc producers harvested 44 tons more in 2006, and Merlot producers harvested 49 tons less in 2006. Also, Cabernet Sauvignon producers harvested 30 more tons in 2006 compared to 2005.

The 2006 growing season started with a mild winter with little or no indication of any winter injury for the majority of vineyards. Several areas received rain in May, but remained relatively dry up through July. Some producers south of the James River and in Southeast Virginia experienced problems with poor fruit set in June due to stress brought on by the hot and dry weather during bloom. There were also complaints of wildlife and bees damaging crops more than usual in 2006. In late August, Tropical Storm Ernesto was a problem for some producers that were expecting a quick, dry harvest. The precipitation from Ernesto, along with the frequency of rains in September and October, made it difficult for some producers growing late maturing reds, but overall reports of fruit quality were very high across the state. Despite the problems growers encountered, the 2006 growing season surpassed 2005 with the largest crop produced in Virginia grown on the largest amount of bearing acreage.

Vegetables

Virginia vegetable producers experience another near normal growing season in 2006. Spring began with mild temperatures and dry conditions that were good for field preparations but hindered early growth of some vegetable crops. Much needed rain came late in the spring and in early summer months improving the vegetable crop conditions. The Commonwealth experienced unseasonably high temperatures throughout the summer. As the summer progressed, dry conditions returned, but moisture levels improved in the fall due to plenty of rainfall. Virginia's fresh market vegetable producers harvested 18,800 acres of crop, valued at over \$121 million in 2006. These numbers compare to 19,150 acres and \$111 million last year. Snap bean, sweet corn, and tomato yields

increased, while cabbage, cucumber, and watermelon yields decreased as compared to 2005. When compared to last year, cucumber, sweet corn, tomato, and watermelon prices increased by \$5.00, \$0.30, \$1.60, and \$1.30 per hundredweight respectively. On the other hand, cabbage price decreased by \$5.30 per hundredweight, and snap bean price decreased by \$1.00 per hundredweight.

The value of major vegetables grown for processing in Virginia totaled \$620,000, up from \$423,000 last year. Harvested acres of processing vegetables were up 250 acres as compared to the previous year.

Floriculture

U.S. Value

The 2006 Floriculture Crops Survey was conducted in 15 states. The total wholesale value of floriculture crops grown by operations exceeding \$100,000 of sales in the 15-State program is \$3.83 billion for 2006, down 3 percent from the revised 2005 total. These largest operations account for 96 percent of the total value of floriculture crops, but comprise only 46 percent of all producers.

U.S. Sales

Bedding and garden plants remained the largest sales category in 2006, representing 47 percent of the wholesale value of all the reported crops. The wholesale value of bedding and garden plants in 2006 was \$1.79 billion, down slightly from the previous year.

WHOLESALE VALUE OF FLORICULTURE SALES, 2005-2006

| TYPES | Virginia ^{1/} | | United States ^{2/} | |
|---------------------------------------|------------------------|----------------------------|-----------------------------|----------------------------|
| | 2005* | 2006 -thousand dollars- | 2005* | 2006 -thousand dollars- |
| Growers With \$100,000+ | | | | |
| Cut Flowers | 810 | 1/ | 395,884 | 411,337 |

| Propagative Floriculture Material | -- | 1/ | 365,082 | 363,270 |
| TOTAL | 80,113 | 1/ | 3,969,024 | 3,834,912 |
| TOTAL ALL GROWERS^{3/} | 87,378 | 1/ | 4,147,614 | 3,995,847 |

* Revised. -- No sales indicated. 1/ Survey was not conducted in VA due to budget constraints in 2006. 2/ Represents growers in 15 states in 2006. 15 states are CA, FL, HI, IL, MD, MI, NJ, NY, NC, OH, OR, PA, SC, TX, and WA. 3/ Wholesale value of sales as reported by growers with \$100,000 or more in sales of floriculture crops plus a calculated wholesale value of sales for growers with sales below \$100,000. The value of sales for growers below the \$100,000 level was estimated by multiplying the number of growers in each size group by the midpoint of each dollar value range.

Livestock and Dairy

Cattle and Calves

Virginia's Cattle and Calf numbers decreased by 40,000 in 2006. All cattle and calves in the commonwealth as of January 1, 2007, totaled 1.62 million head. Beef cow inventory decreased to 710,000 head compared to last year's 727,000 head. Milk cow inventory decreased by 3,000 to 100,000 head. The total inventory of cows that have calved decreased from last year to 810,000 head. In comparison to last year, milk cow replacement heifers remained the same, beef cow replacements decreased by 5,000 head, and other heifers increased by 7,000 head. Steers decreased to 130,000, bulls decreased to 40,000, and calves increased to 410,000 in 2006.

Milk Production

Milk Production in Virginia totaled 1.77 billion pounds in 2006, remaining steady from 2005. Milk produced per cow increased from last year's 16,990 pounds to 17,363 pounds in 2006. The value of milk production decreased by 27 million dollars to 267.4 million dollars.

Sheep and Lambs

Sheep and Lamb inventory in Virginia totaled 72,000 head on January 1, 2007, up 5,000 head compared to last year. There were 1,700 farms with sheep, comprising 2 percent of the national total. Ewes one year and older totaled 41,000 head, up 4,000 head from a year earlier. There were 12,000 replacement lambs on the first of the year, up 2,000 from last

(Sheep and Lambs continued)

year. The 2006 lamb crop was 49,000 head unchanged from the previous year. Sheep and lambs on feed for market slaughter 16,000 head, unchanged from previous year. Virginia was 25th in the nation for total number of sheep.

Goats and Kids

Goat and Kid inventory in Virginia totaled 47,800 head on January 1, 2007. Meat and all other goats totaled 44,000 head, up 3,000 head compared to last year. Milk goats totaled 3,800 head, up 600 head from a year earlier. Virginia ranks 12th in the nation for total number of meat and other goats.

Hogs and Pigs

There were 365,000 Hogs and Pigs in Virginia as of December 1, 2006. This was down 125,000 head from last year. Breeding hog inventory totaled 30,000 head and market hogs totaled 335,000 head. Market hogs inventory decreased 120,000 head when compared to December 1, 2005. The 2006 pig crop totaled 548,000, up 1 percent from last year. Sows farrowed increased 3,000 head from the previous year at 62,000 head. The average pigs per litter was down 4 percent from last year. The number of farms raising hogs was unchanged from last year at 850 farms.

1/ Average number during year, excluding heifers not yet fresh.

2/ Excludes milk sucked by calves.

3/ Milk sold to plants and dealers as whole milk and equivalent amounts of milk for cream.

Includes milk produced by dealer's own herds, and small amounts sold directly to consumers. Also includes milk produced by institutional herds.

4/ Valued at average returns per 100 pounds of milk in combined marketings of milk and cream.

5/ Cash receipts from marketings of milk and cream plus value of milk used for home consumption.

6/ Includes value of milk fed to calves.

3/ Excludes milk suckled by calves.

Poultry

Commercial Broilers

Virginia ranks 10th in the nation in broiler production. The number of broilers raised in Virginia decreased by 4.1 million from 260.3 million in 2005 to 256.2 million in 2006. Pounds produced in 2006 was 1.33 billion, up 4.7 million from 2005. The total value of broilers in the Commonwealth decreased by 11 percent from 570.8 million dollars in 2005 to 506.2 million dollars in 2006.

Turkeys

Turkeys are Virginia's highest ranking poultry commodity with the Commonwealth ranked 4th in the nation. Turkey production increased by 1.5 million birds from 20 million in 2005 to 21.5 million in 2006. Turkey pounds produced

(Turkeys continued)

increased 10 percent in 2006 from 502 million pounds in 2005 to 554.7 million pounds in 2006. Total value of Virginia's turkey production increased 13 percent from 230.9 million dollars in 2005 to 260.7 million dollars in 2006.

Eggs

Virginia egg production totaled 806 million in 2006, down 17 million from the 823 million eggs produced in 2005. The value of egg production went from 67.4 million dollars in 2005 to 66.8 million dollars in 2006, a 1 percent decrease. Producers averaged \$0.99 per dozen of eggs, which is up \$0.01 from 2005. Virginia ranks 27th in the U.S in egg production.

Trout

Production

Virginia's 2006 Commercial Trout Production was valued at 1,475,000 dollars. This is up 17 percent from the 1,256,000 dollars in 2005. This ranks Virginia 9th nationally in value of trout sold (excluding eggs).

Sales

Foodsize trout sold totaled 641,000 pounds, down 29,000 pounds from 670,000 pounds in 2005. The average value per pound for foodsize trout, at \$2.01, was 53 cents above the 2005 price. Foodsize trout account for the largest portion of the Commonwealth's trout sales. Recreational and fee fishing was the biggest sales outlet for foodsize trout.

Loss

There were 301,000 trout lost in 2006, down 719,000 from 2005. The top two categories were 66 percent lost to disease and 30 percent lost to predators.

3/ 20 State Total.

Honey

Production

Virginia had 8,000 producing colonies in 2006, the same as 2005. Honey price decreased from \$2.22 per pound in 2005 to \$2.19 per pound in 2006. Honey production (from producers with at least 5 colonies) totaled 336,000 pounds in 2006, up 40,000 pounds from the previous year. Yield per colony was 42 pounds in 2006, up from 37 pounds per colony in 2005. Stocks in 2006 equaled about 34 percent of production, up from 20 percent last year.

U.S.

U.S. honey prices increased during 2006 to \$1.04 per pound, up 14 percent from 2005. Production in 2006 (from producers with at least 5 colonies) totaled 155 million pounds, down 11 percent from 2005. There were 2.39 million colonies producing honey in 2006, down 1 percent from 2005. Yield per colony averaged 64.7 pounds, down 11 percent from 72.4 pounds in 2005. Colonies that produced honey in more than one state were counted in the state in which the honey was produced; therefore, yields per colony may be understated. Colonies were not included if honey was not harvested. Producer honey stocks were 60.5 million pounds on December 15, 2006, down 3 percent from the previous year.

1/ Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. 2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

1/ Insufficient data for this category.

2/ Benefits, such as housing and meals, are provided some workers, but the values are not included in the wage rates.

3/ Excludes Agricultural Service Workers.

4/ The January 2007 Farm Labor Survey was not conducted.

County Data Summaries

The following section highlights each county in Virginia. Included are the major crops and livestock species published for Virginia, along with the rank among all counties in the state. It is important to note that county data are not published for counties where individual operations may be disclosed or in counties with numbers too small to estimate.

Data published in this section are available elsewhere in this bulletin. Also, included with each county highlight table are the most recent agricultural census county data (2002) for the number of farms, total acres in farms and harvested cropland. Census cash receipts are shown for crops, and livestock and total cash receipts with rank in the state.

Top Ten Counties

In Farm Income
